

# Worker-level compliance & site access controls

Your solution for onboarding, tracking, and managing an individual worker's compliance before entering a job site.

Limit unnecessary risks, ensure compliance from contractor to individual worker, and control who is on your job sites.

Verify every worker is approved for work, is in compliance for D&A, and is trained and qualified according to your requirements.

Catch work being done by non-compliant or fraudulent workers with more thorough worker verification.

Avoid work delays and improve total uptime by verifying your workers are ready-to-work before arriving on site.

Alpha Project: Coyote Springs Site

CONTRACTOR REQUIREMENTS

Product Name	Valid Thru	Status Description
Crane Operator Certification	08/18/25	Meets Requirements

## Proactively manage compliance at a worker level

Customize your worksite safety process, reduce risk, and improve compliance to create your culture of safety. Build your own pre-screening process to validate the unique needs of your project, work type or job site.

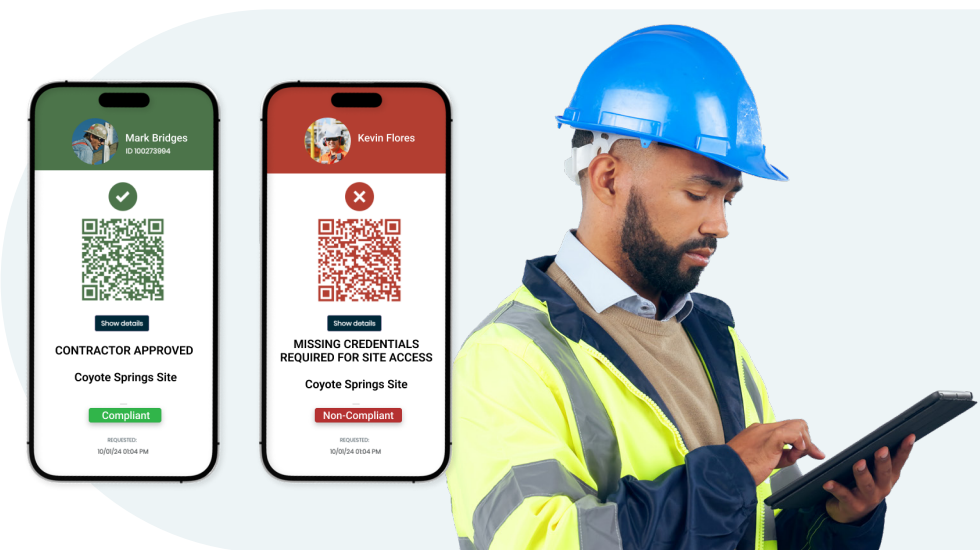

## Supercharge your onboarding process

Ensure all workers coming on-site are compliant before they arrive. Pre-screen workers prior to accessing the worksite to confirm that they have the verifications and qualifications required to safely complete work at that site.

## Know who's on-site and in compliance

Monitor every worker at every worksite to identify risks before they become incidents. Using a red or green indicator status, as part of a digital ID, your team can visualize who is approved and ready to work.

## This is worker-level compliance with Veriforce

### \$600,000+ saved

Onboarding costs saved in less than one year by eliminating overly complex, highly manual, and resource intensive processes.

### 74 Non-compliant workers stopped

Eliminate workers arriving on-site with expired, invalid or non-authorization before incidents occur.

### 22 fake IDs captured

Ensure you are protected from fraudulent activity by adopting a proactive approach to block those bad actors from accessing your sites.

The implementation of  
**veriforce WorkerPass**  
has been a game changer for us.
